

LEVEL 3 – UNIT TEST

LISTENING

A  5.1 You will hear five people talking about climate change. Choose from the list what each speaker says. There are three extra answers you do not need.

- | | |
|-------------------|--|
| 1 Speaker 1 _____ | a I'm proud of what previous generations did. |
| 2 Speaker 2 _____ | b People of my age will be responsible for finding solutions. |
| 3 Speaker 3 _____ | c Climate change hasn't been proven by science. |
| 4 Speaker 4 _____ | d For some people, money is more important than the environment. |
| 5 Speaker 5 _____ | e We all need to change our everyday habits. |
| | f Young people's habits are making the situation worse. |
| | g It's too late to do anything about the problem. |
| | h If we really want, we have solutions to help us with this problem. |

VOCABULARY

A Unscramble the words to complete the sentences.

- A temperature rise of just one **edeger** will endanger our ecosystem. _____
- The **limacte** in Britain is mild and rainy. _____
- Do you know what the **etwahre** forecast is for next month? _____
- California is a region that often suffers **ofrets ifser**. _____
- What will happen if the polar ice caps **etlm**? _____

B Choose the correct answers to complete the text.

Many people think the authorities should do more to create **1 laws** / **fines** to help tackle environmental problems. For example, people could pay a **2 law** / **fine** if they don't recycle all their household waste. Local authorities **3 provide** / **require** trash cans for each house, but many people still don't use them properly. If we want to **4 reduce** / **allow** the amount of waste that goes into landfills, we need to take action now. But it **5 requires** / **pays** local authorities to strictly enforce the rules on everyone, with no exceptions.

C Complete the sentences with the correct words from the box.

net pots roof rubber steel

- When I go out in the rain, I wear my _____ boots.
- We keep all the cooking _____ in a cabinet in the kitchen.
- A fishing _____ can be a danger to many kinds of sea animals, as well as birds.
- China produces metals, such as _____, for industrial production.
- They want to plant a garden on the flat _____ of their house.

GRAMMAR

A Complete the sentences with the correct conditional form of the verbs in parentheses.

- 1 If people ate more vegetables, they _____ (be) healthier.
- 2 If you _____ (recycle) plastic, you help the environment.
- 3 Unless we _____ (stop) using fossil fuels, the Earth will get hotter.
- 4 If the polar ice caps melt, there _____ (be) flooding in coastal areas.
- 5 If we _____ (not use) cars, there would be less pollution.

B Choose the correct answers (a, b, or c).

- 1 I hope it ... this weekend.
 a doesn't rain b didn't rain c wouldn't rain
- 2 I wish they ... plastic cups and straws.
 a banned b would ban c will ban
- 3 I hope you ... into town—it's a warm day and the walk will do you good.
 a aren't driving b won't drive c wouldn't drive
- 4 I wish I ... more time to help with the recycling project.
 a will have b would have c had
- 5 I wish we ... more to stop climate change.
 a did b are doing c could do

C Check (✓) the correct sentences. Rewrite the sentences that have mistakes. There is at least one correct sentence.

- 1 ☐ I wish you don't drive everywhere.

- 2 ☐ If you sit in the sun for too long, you will burn.

- 3 ☐ I hope young people would fight for better environmental laws.

- 4 ☐ Unless we don't change our habits, our planet will be destroyed.

- 5 ☐ I wish our household couldn't produce so much waste.

READING

A Read the text. Choose *True*, *False*, or *NS* (not stated).

The future of our planet: are governments doing enough?

Many of us are becoming more and more worried about climate change. How will global warming affect the future of our whole planet? Does the planet even have a future? There are also other questions to which people want an answer. The questions are, "Why are governments so slow to react to the crisis? Why are they doing nothing to reduce the damage?" This damage could result in the disappearance of our own species!

Unfortunately, these are not simple questions and it's not easy to give simple answers. Not all issues can be expressed in phrases like "Ban plastic" or "Stop burning fossil fuels now!" The situation is incredibly complicated because our planet, its economies, and its financial systems all depend on each other. Our planet is, in many ways, just a global village. And since the beginning of the Industrial Revolution, whether we make cars in Germany, steel in China, or computer parts in India, we have used fossil fuels to power our factories around the world.

If the governments of the world stopped making products, vehicles, plastics, metals, and so on, what would happen? If our factories stopped burning fossil fuels, what would the result be? Well, first of all, millions of people would immediately become unemployed. They would have no money to pay for food and bills. Transportation systems, banks, and the whole economy of many countries would probably stop working, and this would have terrible consequences for millions of people.

World governments have to use technology to solve the problems we are facing. They should find a way to build new energy systems which don't use fossil fuels. Then we can continue with our way of life, but without destroying the planet. There can be little doubt, though, that they do need to do much more and much faster.

- | | |
|---|-------------------|
| 1 Most people understand that governments are trying to solve the problems. | True / False / NS |
| 2 Systems across the world are connected to each other. | True / False / NS |
| 3 China uses more fossil fuels than any other nation. | True / False / NS |
| 4 If we suddenly stopped using fossil fuels, people's lives would improve. | True / False / NS |
| 5 Developments in technology are harmful to the planet. | True / False / NS |
