

Chapter 05 – Functions in JavaScript

Full Exam Paper with Answers

Lecturer: Dr. Ahmed Taajir

Part I – Multiple Choice Questions (20 Marks)

1. 1. What is a function in JavaScript?

- A) A keyword
- B) A block of reusable code
- C) A variable type
- D) A string operator

☒ Correct answer: B

2. 2. Which keyword is used to define a function in JavaScript?

- A) def
- B) func
- C) function
- D) declare

☒ Correct answer: C

3. 3. A function can be called by using:

- A) function name only
- B) function name followed by parentheses
- C) parentheses only
- D) call keyword

☒ Correct answer: B

4. 4. Which of the following functions returns a value?

- A) Void function
- B) Value-returning function
- C) Undefined function
- D) Anonymous function

☒ Correct answer: B

5. 5. Which keyword is used to return a value from a function?

- A) break
- B) continue
- C) return
- D) output

☒ Correct answer: C

6. 6. A function that does not return a value is called:

- A) Value function
- B) Void function
- C) Empty function
- D) Constant function

☒ Correct answer: B

7. 7. What are placeholders in a function definition called?

- A) Arguments
- B) Parameters
- C) Variables
- D) Constants

☒ Correct answer: B

8. 8. What are the actual values passed to a function called?

- A) Parameters
- B) Arguments
- C) Variables
- D) Constants

☒ Correct answer: B

9. 9. Default parameters provide:

- A) Errors
- B) Predefined values when no argument is given
- C) Loops
- D) Conditions

☒ Correct answer: B

10. 10. A function expression is:

- A) A variable storing a function
- B) A loop

- C) A constant
- D) A data type

☒ Correct answer: A

11. 11. An arrow function uses the syntax:

- A) ->
- B) =>
- C) <-->
- D) ==

☒ Correct answer: B

12. 12. In an arrow function with one parameter:

- A) Parentheses are required
- B) Parentheses can be omitted
- C) return must be used
- D) Function name must be written

☒ Correct answer: B

13. 13. Variables declared outside any function are in:

- A) Local scope
- B) Global scope
- C) Block scope
- D) Function scope

☒ Correct answer: B

14. 14. Variables declared inside a function are in:

- A) Global scope
- B) Local scope
- C) Block scope
- D) External scope

☒ Correct answer: B

15. 15. Variables declared inside { } using let or const have:

- A) Global scope
- B) Local scope
- C) Block scope
- D) Static scope

☒ Correct answer: C

16. 16. A callback function is:

- A) A function that returns multiple values
- B) A function passed as an argument to another function
- C) A global function
- D) A recursive function

☒ Correct answer: B

17. 17. Why are callbacks used?

- A) To handle asynchronous operations
- B) To declare variables
- C) To define constants
- D) To stop loops

☒ Correct answer: A

18. 18. An anonymous function:

- A) Has no name
- B) Cannot be called
- C) Is global
- D) Is recursive

☒ Correct answer: A

19. 19. Arrow functions were introduced in:

- A) ES5
- B) ES6
- C) ES7
- D) ES8

☒ Correct answer: B

20. 20. Block scope was introduced in which version of JavaScript?

- A) ES3
- B) ES5
- C) ES6
- D) ES7

☒ Correct answer: C

Part II – True or False (20 Marks)

1. A function is a block of reusable code.

Answer: True

2. Functions in JavaScript cannot return values.

Answer: False

3. Void functions perform tasks without returning values.

Answer: True

4. Value-returning functions use the return keyword.

Answer: True

5. Parameters and arguments are the same thing.

Answer: False

6. Default parameters help prevent undefined values.

Answer: True

7. Function expressions can be stored in variables.

Answer: True

8. Arrow functions use the => symbol.

Answer: True

9. Parentheses are mandatory for single-parameter arrow functions.

Answer: False

10. Variables declared outside functions have global scope.

Answer: True

11. Variables inside a function have local scope.

Answer: True

12. let and const follow block scope rules.

Answer: True

13. var supports block scope.

Answer: False

14. A callback function is passed as an argument to another function.

Answer: True

15. Callbacks are used for asynchronous operations.

Answer: True

16. Anonymous functions must have a name.

Answer: False

17. Arrow functions were introduced in ES6.

Answer: True

18. Global variables can be accessed inside functions.

Answer: True

19. Local variables can be used anywhere in the program.

Answer: False

20. Callback hell refers to too many nested callbacks.

Answer: True

Part III – Direct Questions (20 Marks)

1. Define a function in JavaScript.

Answer: A block of reusable code that performs a specific task.

2. Mention two advantages of using functions.

Answer: Code reusability and better organization.

3. Differentiate between function definition and function calling.

Answer: Definition creates a function; calling executes it.

4. Write syntax for defining a function.

Answer: `function name(parameters) { code }`

5. Write syntax for calling a function.

Answer: `functionName(arguments);`

6. List two types of functions.

Answer: Void functions and Value-returning functions.

7. What keyword is used to return a value?

Answer: return

8. What are parameters in a function?

Answer: Placeholders defined in a function to receive values.

9. What are arguments in a function?

Answer: Actual values passed to a function when called.

10. What are default parameters?

Answer: Predefined values assigned to parameters if no arguments are passed.

11. Write example of a default parameter function.

Answer: `function greet(name='User'){ console.log('Hello '+name); }`

12. Define a function expression.

Answer: A function assigned to a variable, possibly anonymous.

13. Define an arrow function.

Answer: A compact syntax for writing functions using `=>`.

14. Give an example of an arrow function.

Answer: `const add = (a,b) => a + b;`

15. What is variable scope?

Answer: The visibility and accessibility of a variable within a program.

16. Differentiate between global and local scope.

Answer: Global variables are accessible everywhere; local only inside functions.

17. What is block scope?

Answer: Variables declared inside `{ }` using `let` or `const` are only accessible in that block.

18. Define a callback function.

Answer: A function passed as an argument to another function and executed later.

19. Give an example of a callback function.

Answer: `setTimeout(() => console.log('Done!'), 2000);`

20. What is callback hell?

Answer: A situation where many nested callbacks make code hard to read.
