The books that I find most entertaining are adventure stories.
- 5 ☐ We never went to Hallstatt before, but we loved it.
We had never been to Hallstatt before, but we loved it.

READING

A Read the text. Choose *True*, *False*, or *NS* (not stated).

What happened to privacy?

One of the most interesting things about the rapid speed of technological change is how quickly our ideas about privacy have changed. Many of us were brought up to believe that our private life was very important. Generally, people didn't want others to know too much about them or their activities.

These days, we can be tracked online in many different ways. When joining a social-media platform, we have to give information about ourselves. The "loyalty cards" we use at our local supermarket and our online shopping activities are a record of the things we buy. In addition, a home assistant, such as Alexa, can record what we say and do in our homes. Neighbors, or local businesses, may have cameras that film us every time we go to their door. And, of course, employers can check up on our online activities, such as what we post on social media. This means that criminals can get information about us from any site that does not have good security.

All of this means that many of our personal details such as our address, phone numbers, and employment details can be found easily online by almost anyone. These details might help people sell things to us, but they could also help others steal from us. They might steal money from our bank accounts or even our identities. But it's not only personal details, such as where we bank, that can be found online. People also reveal a lot of other information about their private lives by posting pictures of nights out, family celebrations, and vacations. In the past, this was information that was shared only with our closest friends.

While older generations may find these developments a little frightening, most younger people don't seem too worried about the issue. This is probably because sharing information on the internet is normal for them. They are more likely to share personal information than older people who were brought up with a stricter idea of what information about themselves they want to share. It's likely that in the future very little personal information will be private.

- | | |
|--|--------------------------|
| 1 People didn't value privacy in the past as much as we do now. | True / False / NS |
| 2 Companies collect information about our online shopping habits. | True / False / NS |
| 3 Some sites don't look after private information very well. | True / False / NS |
| 4 All employers check up on their employees' internet activities. | True / False / NS |
| 5 Older people are unaware of the dangers of sharing information online. | True / False / NS |

WRITING

A Write a short biographical essay about a public figure you admire. Write at least 200 words.

This image shows a single sheet of white paper with horizontal blue or grey ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

SPEAKING
